

Live Life. Connecting people in real life.

Word filter

Word filter comes with an optional default list of unwanted language, any additional undesirable words can be easily added to the list, alternatively the filter can be removed, creating a language restriction free chat forum.

Real time image scanning

Live Life uses Clarifai, software designed to scan images and filter the uploading of inappropriate content in real time. It uses AI to detect images with too much nudity or violence, it can also be adjusted to detect many other common traits in images. See <https://clarifai.com/moderation>

QR code

The use of a QR code in our app is a unique and innovative idea, it basically is the foundation of our app. You can only post if you are in the environment and all outside communication is blocked, this prevents unfavorable conduct immensely.

Administration Dashboard

By letting the administration control the chat location, they are easily able to remove unwanted users immediately.

Restricted user lists

In the event that only a select few people are trusted to comment and post on a screen, the admin is able to manage the chat access.

Flagging

When an unwanted comment is posted on the chat, users have the option to flag the abuser, bringing him to the attention of the admin, who can then choose to remove it.
